53rd MEETING OF THE ACADEMIC COUNCIL

MINUTES OF THE FIFTY THIRD MEETING OF THE ACADEMIC COUNCIL HELD ON 26 AUGUST 2022 AT 10.00 A.M.

PRESENT

The following members of the Academic Council attended the meeting:

Members

Professor Prateek Sharma, Chairperson Professor Ramakrishnan Sitaraman Professor Anandita Singh Prof Shreekant Gupta Professor Vinay Shankar Prasad Sinha Dr Sudipta Chatterjee Dr Naqui Anwer Dr Sukanya Das Dr Chaithanya Madhurantakam Dr Anu Rani Sharma Dr Montu Bose Dr Chander Kumar Singh Dr Seema Sangita, Controller of Examination Mr Kamal Sharma, Secretary

Special Invitee

Dr Shashi Bhushan Tripathi Dr Kavita Sardana Dr Shruti Sharma Rana Dr Swarup Dutta Dr Gopal Sarangi Dr L.N. Venkataraman Dr Aviruch Bhatia Dr Abhijit Datey Dr Deepty Jain

Professor Sagnik Dey, Mr Shubhashis Dey, Dr Sabhyata Bhatia, Professor Shaleen Singhal, Prof. P.S.N. Rao, Mr Manoj Chugh, Mr Rajesh Ayapilla, Mr Rahul Mittal and Professor Arun Kansal could not attend the meeting.

Prof Prateek Sharma welcomed all the Academic Council members. He introduced the new member to the AC, Prof. Shreekant Gupta. He said that the institution will essentially be benefitted from the experience of Prof Gupta.

Item No. 1: To confirm the minutes of the Fifty Second Meeting of the Academic Council held on 08 August 2022. The minutes of the Fifty Second Meeting of the Academic Council, held on 08 August 2022, were circulated to the members and comments received have been incorporated.

The Academic Council may, therefore, consider confirming the minutes, as circulated.

TS/AC/53.1.1 The Council resolved that the minutes of the 52nd Academic Council Meeting held on 08 August 2022 be confirmed.

Item No. 2. Inclusion of two cross-cutting courses across all Master's programmes.

Dean (Academic) informed the members that in consultation with all Master's Programme Coordinators and HoDs, it has been decided that the following two courses (already approved and being offered) will be embedded across all programmes and offered as audit, starting with the academic year 2022-23. Course delivery will take place in a modular form:

a. NRE 165 Introduction to sustainable development, Semester 1, 1 credit:

This is to ensure that all incoming students gain perspectives on sustainable development that could inform their learning across their respective fields of study. (Previously approved course outline is provided as **Enclosure 1**).

b. PPM 179 Design Thinking, Semester 3, 2 credits:

This is to enable students to acquire problem-solving skills and a systematic approach to problem-solving from ideation to implementation. (Previously approved course outline is provided as **Enclosure 2**).

The two courses will be compulsory audit courses except wherever offered for credit in accordance with the requirements of specific programmes. However, it will not be applicable to students of MA (Public Policy and Sustainable Development) programme due to difference in the Academic Calendar.

TS/AC/53.2.1 The Academic Council resolved to approve the inclusion of NRE 165 and PPM 179 as cross-cutting courses across all Master's programmes except to students of MA (Public Policy and Sustainable Development) programme as placed at Enclosures 1 and 2.

Item No. 3. Devising a university-wide system of open electives to facilitate multidisciplinarity as envisaged in NEP 2020

Dean (Academic) informed the members that the courses taken by students enrolled in a given Master's degree programme will be classified as follows:

- a. Core Essential to the programme
- b. Programme elective Specific to the disciplinary and/or skill requirements of the programme
- c. Open elective A course that a student elects to enroll in, that is part of a different programme (wherein it may be a core or programme elective).

d. Open elective (mandatory) – As above, except that open electives for a certain number of credits are specifically recommended by a given programme

Enrolment and grading will be as follows:

- a. Students will be permitted to opt for credit or audit in open electives at the time of registration, subject to course availability and scheduling.
- b. Grades obtained in all non-mandatory open electives will be listed separately on the transcript and not count towards the final CGPA.
- c. Mandatory open elective courses will count towards the total CGPA up to the credit limit specified by the guidelines of the degree programme the student is enrolled in.

Additionally, different Master's programmes have determined to offer some or all of their course offerings as 'open electives' to students enrolled in other programmes. The list of courses that are not available as open electives due to disciplinary pre-requisites is given in **Enclosure 3**. This list is subject to periodic updating and revision as courses and programmes undergo revisions and restructuring. He further stated that none of the courses in M.A. (Public Policy and Sustainable Development) will be available as open electives because the said programme follows a schedule that is entirely separate from that of the main academic calendar. Also, Minor/major projects, dissertations, master's thesis, field visit will not be available as open electives. Credit requirements to be fulfilled in the form of mandatory open electives (if any) will be specified by the degree programme the student is enrolled in.

TS/AC/53.3.1 The Academic Council resolved to approve classification of courses to facilitate multi-disciplinarity as envisaged in NEP 2020. The list of courses which are not available as open electives as placed in **Enclosure 3** is subject to periodic updation as per the programme requirement.

Item No. 4. To consider and approve the modified M.Sc (Geoinformatics) programme

Dr Anu Rani Sharma presented to the Academic Council the modified M.Sc (Geoinformatics) programme as placed at **Enclosure 4**. The members appreciated the modified programme structure and approved it.

TS/AC/53.4.1 The Academic Council resolved to approve the modified M.Sc (Geoinformatics) programme as placed at Enclosure 4.

Item No. 5. To consider and approve the revised programme structure and first semester course outlines of MBA (Sustainability Management), M.Sc. (Economics) and MA (Sustainable Development Practice) programme

Dr Montu Bose, Dr Kavita Sardana and Dr Swarup Dutta respectively presented to the Academic Council the revised programme structure and first semester course outlines of MBA (Sustainability Management), M.Sc. (Economics) and MA (Sustainable Development Practice) programme placed as **Enclosure 5**. After detailed deliberation members suggested some minor modifications to be carried out in the course outlines and approved the programme structure and course outlines.

TS/AC/53.5.1 The Academic Council resolved to approve the revised programme structure and first semester course outlines of MBA (Sustainability Management), M.Sc. (Economics) and MA (Sustainable Development Practice) programme placed as **Enclosure 5**.

Item No. 6. To consider and approve the revised programme structure and first semester course outlines of M.Tech (Urban Development Management) and M.Tech (Renewable Energy Engineering and Management) programme.

Dr Deepty Jain and Dr Aviruch Bhatia respectively presented the revised programme structure and first semester course outlines of M.Tech (Urban Development Management) and M.Tech (Renewable Energy Engineering and Management) programme placed as **Enclosure 6**. Members suggested some minor corrections to the course outlines to be carried out and approved the programme structure and course outlines.

TS/AC/53.6.1 The Academic Council resolved to approve the revised programme structure and first semester course outlines of M.Tech (Urban Development Management) and M.Tech (Renewable Energy Engineering and Management) programme placed as **Enclosure 6**.

Item No. 7. Any other item with the permission of the Chair

Prof. Prateek Sharma presented the below mentioned two courses:-

- (a) Entrepreneurship in Solid Waste Management (Enclosure 7)
- (b) Air Pollution Monitoring and Control (Enclosure 8)

He stated that it is proposed to offer these two courses as open electives across programmes and requested the Academic Council's concurrence for the same.

TS/AC/53.7(a)(b) The Academic Council resolved to approve the abovementioned two courses as open electives across programmes placed as Enclosure 7 and 8.

There being no other items for discussion, the meeting was adjourned with a vote of thanks to the Chair at 1750 hours.

Sd/ Kamal Sharma Registrar (Acting)

Enclosure:-

- Enclosure 1. Course outline of NRE 165
- Enclosure 2. Course outline of PPM 179
- Enclosure 3. List of courses that are not available as open electives
- Enclosure 4. Modified M.Sc (Geoinformatics) programme

- Enclosure 5. Revised programme structure and first semester course outlines of MBA (Sustainability Management), M.Sc. (Economics) and MA (Sustainable Development Practice) programme
- Enclosure 6. Revised programme structure and first semester course outlines of M.Tech (Urban Development Management) and M.Tech (Renewable Energy Engineering and Management) programme
- Enclosure 7. Course outline of Entrepreneurship in Solid Waste Management
- Enclosure 8. Course outline of Air Pollution Monitoring and Control

The co and ch and op the bas Course of each Science Engine enviro	Course Description The course seeks to build an inter-disciplinary perspective on understanding sustainable development concerns and challenges. This course familiarizes students with current debates and perspectives in analyzing constraints and opportunities for sustainable development. It also aims to provide students with a general introduction to the basic core competencies and practical skills required of a "generalist" development practitioner. Course topics will be grounded in a practical, multi-disciplinary approach that will focus on the inter-relationship of each of the following core fields of study (Agriculture and Nutrition, Economics, Environment and Climate Science, Management, Policy, Anthropology and Social Studies, Public Health and Technology and Engineering), thereby exposing students to the complex relationships between social, economic and environmental processes

Learning outcomes
• The students will have a "generalist" development practitioner's perspective towardsenvironmental management.
• The students will have fairly good understanding of the current debates around concepts of sustainable
development and practices.

Student responsibilities

The students are expected to submit assignments and all evaluation component within the timelines and come prepared with readings when provided. Attendance and Participation in Group Presentation sessions is mandatory, and course feedback is obligatory.

Prepared By:

Dr. Akash Sondhi

Course reviewers

- 1. Dr. Gerrit De Waal, Department of Management, RMIT University, Melbourne City Campus.
- 2. Mr. Shashank Deshpande, Chief Design Officer, Globant India, Pune
- 3. Mr. Praveen Bhond, Agile Consultant, Pune

Enclosure 3

Courses that are not available as open electives

NOTES:

1. The courses that are not available as open electives are listed below in a programme-wise manner.

2. These lists have been finalized in a decentralized manner at the level of each programme taking into account the views and teaching experiences of core faculty members teaching in the said programme.

3. In some cases, the courses listed do not have course codes or are listed as 'proposed courses' because approval from the Academic Council of programme and/or course revision and/or restructuring is pending.

4. The list provided below is current as of August 21, 2022.

1. M.A. (Public Policy and Sustainable Development): No course offered in this programme is available as an open elective because the academic calendar for this programme is different from that followed by all other programmes.

S. No.	Course code	Course	Credits
1		Financial Reporting and Analysis	4

Enclosure 4

MSc Geoinformatics program structure (2022-23 Academic Sessions)

Total Credits: 78

40 core taught credits + 22 (major + minor projects) + 12 program elective (PE) credits + 4 open elective (OE) credits

Semester 1 [Core: 12credits] + Open Elective (4 credits)

Sl No.	Proposed course(Course Name)	Credits	Core/Elective	NEP Open elective
1	Principles of Cartography	3	Core	Yes
2	Principles of GIS and GNSS	4	Core	Yes
3	Principles of Remote sensing	3	Core	Yes
5	Applied Mathematics	0	Core audit	ESRM course
6	Communication skills and technical writing	2	Elective	ESRM course
7	Fundamentals of computer and programming	2	Core	Yes

Semester 2 [Core: 20 credits] + Elective (3 credits)

Sl No.	Proposed structure (Course Name)	Credits	Core/Elective	NEP Open elective
1	Digital image processing and information extraction (NRG 172)	4	Core	No
2	Law and policy for maps and remote sensing (NRG 162)	2	Core	Yes
3	Environmental statistics (NRE 115)	4	Core	ESRM course
4	Photogrammetry (NRG 170)	3	Core	No
5	Programming in Geoinformatics (NRG 108)	3	Core	No

6	Project management (NRG 103)	3	Elective	Yes
7	Research methodology and thesis writing (NRE 173)	2	Elective	ESRM course
8	Spatial data modelling and its applications (NRG 163)	4	Core	No

Semester 3 [Core: 8 credits] + [Electives: 9 credits) + Minor project (6 credits)

Sl No.	Proposed structure (Course Name)	Credits	Core/Elective	NEP Open elective
1	Advances in GIS and current trends (NRG 179)	4	Core	No
2	Advances in remote sensing: Thermal, Hyperspectral, Microwave, LiDAR and Drone (NRG 181)	4	Core	No
3	Geoinformatics for atmosphere (NRG 166)	3	Elective	No
4	Geoinformatics for land resources(NRG 164)	3	Elective	No
5	Geoinformatics for water resources (NRG 165)	3	Elective	No
6	Geocomputation (NRG 167)	3	Elective	No
7	Multivariate data analysis (NRE 112)	3	Elective	ESRM Course
8	Integrated watershed management (NRE 167)	3	Elective	ESRM Course
9	Wildlife conservation and management (NRE 151)	3	Elective	ESRM course
10	Climate change and disaster risk reduction (NRC 162)	3	Elective	CSP course
11	Environmental modelling (NRE 171)	4	Elective	ESRM Course

12.	Integrated Impact assessment (NRE 145)	4	Elective	ESRM Course

Evaluation	criteria			
Test 1: Assi	gnment-30%			
Test 2: Pres	entation -30%			
Major exam	3: End-Term Exam-40%			
Test 1 (at th	e end of module 4)			
Structure: T	he students will be required to identify an organization in consultation with the course ins	structor	and su	ıbmit a
report based	l on analysis of primary and/or secondary data covering critical review of any one dimens	ion lik	e job	
satisfaction	values, leadership, organizational citizenship behavior, emotional intelligence, types of c	ommu	nicatio	n etc.
Each report	shall focus on one dimension to be decided in consultation with the course instructor. Par	ameter	s: Typ	e of
data; origin	ality; timeliness, structure and formatting; logic of arguments and flow of thoughts; under	standir	ig of	
theoretical l	base will be the parameters for evaluation. All five components carry equal weightage.			
Test 2 (at th	te end of module 8) Structure: The students will be required to select one book- an			
autobiograp	hy/biography/life-history of a leader, in consultation with the course instructor, and make	a pres	entatio	n
covering (a)	summary of the book and its salient features (b) reflection on the leadership qualities of the	the pers	son (c)	debate
on whether	leaders are born or made and (d) a critical evaluation of their own leadership ability. Para	meters	The	
parameters	for evaluation include structure and layout, originality, analytical ability, and presentation	skills	includi	ng
audio-visua	l aids, body language, voice modulation etc. Each component carries weightage of 25 per-	cent.		
Major exan	a 3 (End-Term Exam; at the end of all modules) This will be an open book exam based of	on all tl	ne mod	ules
covered in t	he class.			
Case Study	discussion: A case may be studied keeping in mind the following:		c 11	
1. a <u>pr</u>	<u>oblem definition</u> statement, which identifies the key issues facing management (not more	than a	tew lin	ies);
2. the	objectives			
3. alte	rnative plan of action	1		
4. $an \underline{a}$	<u>inalysis</u> section which synthesizes and integrates the answers to the key questions for the courts the measures and measures logical arguments in defense of both the meablem definition	case, Di	it does	not
repeat the la	ad solution:	and the		
a set of deta	iled recommendations and suggestions for their implementation including how to overco	maant	noton	tial
issues of im	new recommendations and suggestions for their implementation, meruting now to overed	fine any	poten	1111
Learning out	romes:			
By the end of	the course, the students should be able to:			
 Demonst 	rate an understanding of organizations as complex and pluralistic places where both confl	lict and	coope	ration
are norm	al occurrences (Test 1, 2 and 3)		I .	
 Ability to 	p reflect on their personal leadership skills and ability to exhibit leadership qualities in org	ganizati	ons (T	est 2)
 Ability to 	assimilate, and apply knowledge of basic theories and concepts to solve organizational	behav	iour pr	oblems
(Test 1, 2	2 and 3)			
Pedagogica	l approach

Course De	scription			
This course	e gives students an exhaustive introduction to statistical methods important in business	and re	quired	basic
mathematic	cal exposure for it. For last few decades India's growth rate is impressive along with high	n comp	etition	in the
economy.	Economic growth, expansion of trade and business has forced to invest in infrastr thus businessman can be longer roly on the old system of hit or miss methods or loove their	ucture.	Giver	n this
They have	now to proceed on scientific principles prenare themselves for competitive markets and	nlan tl	eir bu	siness
accordingly	y. The managers have therefore to depend on a variety of factors (like present labour cond	lition, j	orices o	of raw
materials e	tc.). All these factors are statistically taken account of before fixing the price of new com	modity	or ser	vices,
so that it m	ay find a suitable place in the market. This course would be offered to M.B.A. (Sustainab	ility M	lanager	nent).
The course	would equip the students with necessary mathematical and statistical knowledge to be	e ready	for va	arious
	iectives			
In the cour	se the students would be exposed to various examples of economics and business applications	ations.	The pri	imarv
objective o	f this course is to motivate the use of statistical analysis and at the same time encourage stu	idents t	o go be	eyond
the mathem	natical applications of technique and to develop critical judgment through statistical ana	alysis.	The sp	ecific
objectives	of the course are enabling student:	1.	1.1	
to und	estand the role of mathematics in statistics	makin	g probl	ems
 to und to und 	erstand and use of statistical methods ranging from graphical presentation of data to de	scriptiv	ve stati	stical
repres	entation of data for economics & business-related studies;	~r		
• to ana	yse data for understanding the characteristics of the business & economy related factor	s, their	assoc	iation
etc.				
 apply Course course 	statistical techniques to forecast the market situation and to take well informed decisions.

	business; Data sources: Introduction to business-related data & sources.	4	2	2
3	Descriptive Statistics	4	3	2
	Summarizing data: now to nandle data scientifically to make proper decisions;			
	Exploration & representation of business-related data: tabulation, cross tabulation,			
	variability checking, measuring the distribution and location statistically, association			
	among inputs and outputs; Use of diagrams in business projects and reporting.			
4	Probability Distribution	5	4	0
	Introduction to set theory and probability; Additive & multiplicative rules,			
	conditional & unconditional probability, Bayes theorem, Discrete and continuous			
	distributions; Random variables; Discrete & continuous probability distributions:			
	theory and its applications in management (Binomial, Poission, Negative			
	Binomial, Geometric, Hypergeometric, Uniform, Exponential, Normal).			
5	Sampling and Sampling Distributions	5	3	0
	Statistical Inference: concepts & relevance in business; Methods of Sampling:			
	purposive, random, stratified, systematic, multi-stage; Concepts and estimation of -			

	Point Estimation, Sampling Distribution of Mean, Sampling distribution of p,			
	sample size determination; Interval estimation, confidence interval; Determining			
	sample size.			
6	Hypothesis Testing	3	2	0
	Null and alternative hypothesis; Test of significance; Type I and Type II errors;			
	differences of means, proportions, difference of proportions, variances, ratio of			
	variances. Practical issues. Standard normal. γ^2 , t and F distributions.			
7	Analysis of Variance	3	2	0
	Introduction to analysis of variance: Assumptions and analysis of one-way classified			_
	data: Multiple comparisons. Assumptions and analysis of two-way classified data.			
8	Correlation and Simple linear regression – Introduction	3	3	4
Ũ	Correlation, coefficient of correlation. Simple regression model: Least square method:	U	Ū	
	Coefficient of determination: Model assumptions: Testing of significance: Predictions:			
	Residual analysis			
9	Index Numbers	2	3	0
,	Method of construction of index numbers: price and quantity index. Consumer price	-	5	Ŭ
	index (CPI) & Wholesale price index			
		34	23	06
Evaluation	reiteria:	54	23	00
The break-	up of the evaluation procedure is as follows:			
• Test 1	: Written Examination (Module 1, 2 & 3)	20%		
• Test 2	: Written Examination (Module 4)	20%		
• Test 3	: Project Work (Primary data collection, analysis and presentation) (Module 2 -8)	- 20%	Ó 1	- 1 1
method: (d) Representation and explanation: (e) Punctuality and timeline adherence	of the C	lata an	alysis
Note: (a) , (d)	b) and (c) would carry a weightage of 10% each: (c) would carry 30% weightage and (d) would	d carrv	40 %
weightage.]	,	j	
 Major 	Exam: Written Examination (Module 4 – 9)		- 40	%
Learning of	outcomes:			
After succe	ssful completion of the course, students will be able to:	1.2)		
 Develo Apply 	by a sense of the role of mathematics, statistics and data analysis in business (lest 1, 2 an the principles, techniques and approaches for statistical inferences (Test 3 & Major)	a <i>s</i>)		
 Apply Apply 	statistical concepts to business and economic models for predicting outcomes (All Tests)			
 Applic 	ation of data analysis for informed decision making (All Tests)			
Pedagogic	al approach			
The course	will be delivered through lectures and tutorials. Application of statistical tools in bus	iness 8	z econo	omics
related pro	plems would also be a part of the pedagogical approach for the course.

Important Sessions to Remember – (Remember no 'make-ups' allowed for any component) Session 21: Mid Term Test, Session 39: Submission of the group project report, Session 44-46: Group Presentation on the project

Evaluation criteria

- Test 1: Class participation 10% (Based on attentiveness and active participation during the entire course)
- Test 2: News presentations 10% (To pick and critically present latest news about marketing activities done by any company)
- **Test 3:** 20% (Written exam after completion of 16 sessions –to test the understanding of concepts of marketing, strategic planning and consumer behavior)
- **Group Project** 20% (To develop the Marketing Plan for a product / service and apply all the knowledge of marketing gained throughout the course. Report to be submitted at the end of 28 sessions and presentation in the last 2 sessions)
- Major Exam 5: Written Test 40% (Written examination covering the entire course)

Group Project: Marketing News Presentation and Creating a Marketing Plan

Each group should be prepared to make a presentation of news related to marketing gathered over one week prior to its turn to present in the class.

Each group needs to select one product category from the suggested list. No overlap of product category within each section is permitted. Your group may take the perspective of an organization that is either a leader in the category or a follower or a new entrant.

Prepare a detailed report on the project. The report should be submitted in soft copy on my email.

Each group should be prepared to make a presentation project in the class. Time limit is 15 minutes per group.

Case Study discussion: A case may be studied keeping in mind the following:

- a <u>problem definition</u> statement, which identifies the key issues facing management (not more than a few lines);
- the objectives
- alternative plan of action
- an <u>analysis</u> section which synthesizes and integrates the answers to the key questions for the case, but does not repeat the facts themselves, and presents logical arguments in defense of both the problem definition and the recommended solution;
- a set of <u>detailed recommendations</u> and suggestions for their implementation, including how to overcome any potential issues of implementation identified by the analysis.

Learning outcomes:

After attending this course, students will be able to:

- Develop an understanding of the role of marketing in the success of an organization (News presentation, Mid Term exam)
- Develop an ability to identify and assess strategic choices in marketing (Mid Term exam, End Term exam)
- Be able to propose innovative solutions to customer needs and continuous improvement of offerings (News presentation, Group Project)
- Be able to develop the Marketing Plan for any organization (Group Project, End Term exam)

Pedagogical approach

- Interactive Lectures
- Case discussions and presentations
- News crunching

Course Description

The Enron and WorldCom implosions, that were discreet events involving fraud and loss to shareholders, employees and pensioners resulted in changes in policy and legal framework like the enactment of the Sarbanes-Oxley Act, 2002. This marked a significant increase in interest in the field of corporate governance.

The subsequent Global Financial crisis of 2007-2009 which resulted in various governments spending billions of taxpayer money in bail-out packages to business organizations has led to a view that corporate governance reforms need to be much more profound and, possibly, even intrusive and has resulted in a debate on the role to be played by the state, as a regulator, in ensuring good governance. The impact of corporate mis-governance is quite significant and extends far beyond the affected organization; therefore, corporate governance has fast emerged as a significant academic discipline in the last few decades and today occupies a significance presence in the curricula at business schools.

Even though corporate governance reforms in India are of recent origin they are increasingly occupying centre stage in discussions. While the reform process got a kick start with the liberalization of the Indian Economy in the 90s and the progress in legislating and introducing corporate governance reforms in India in the last two decades has been quite significant, their effectiveness continues to be a matter of considerable debate.

Corporate India has also had its share of governance scams with Satyam, which has been described as India's Enron, being the most notable one.

The Companies Act, 2013 ushered in the new regime of corporate governance in India through enhanced disclosures, transparency and good governance. Further, with the evolving framework for responsible business in the country it becomes incumbent to acquaint the participants with the theoretical and practical aspects of corporate governance.

Course objectives

Given that effective corporate governance is crucial to a successful and sustainable corporate enterprise and also the fact that it is an evolving discipline, this course would help the participants to:

- Understand the theoretical underpinnings of ethics and governance for businesses.
- Appreciate how developments in corporate governance have been evolved and trace the history of developments in this field- internationally and in India.
- Analyse the models and frameworks that exist globally and domestically for corporate governance.
- Critically examine the roles, responsibilities, obligations, liabilities and effectiveness of boards of directors, management, shareholders, regulators and other corporate stakeholders with specific reference to the challenges that are faced in a business environment.

Course content				
Module Topic		L	Т	Р
Module 1:	Introduction to the course and discussion on the pedagogy, readings, evaluation	1	0	0
Introduction and	pattern.			
Conceptual

Test 1:	Assignment -25%			
Test 2: C	Jroup Presentation – 25% Written Test 50%			
Major Exam:	written rest $- 30\%$			

Learning outcomes:

By the end of this course, the students would have:

 Developed an understanding of the conceptual framework for Business Ethics & Values and appreciate ethical issues and concerns that arise while taking decisions in personal and corporate life.

- Understood the various theoretical frameworks on which corporate governance theories are premised.
- Appraised the emergence of corporate governance models and frameworks as they have evolved internationally.

 Understood the specific roles, responsibilities, reporting obligations, liabilities and effectiveness of boards of directors, management, shareholders, regulators and other corporate stakeholders in good governance in organizations.

• Appreciate the challenges that are specific to the Indian context and understand why transplanting
- western concepts of corporate governance to the Indian setting may not give the desired solutions.
- Identify the direction for future corporate governance reforms.

Pedagogical approach

The pedagogy used for the course would be a blend of learning in the class room and then applying theory to the analysis of encapsulated situations (case studies), group discussions and project assignments. In this course Learning is not intended to be a one-way transmission of information through lectures and the course is designed to be very practical and supported by strong theoretical foundations. Students would be encouraged to be constructively critical of the assumptions, arguments, positions, the status quo and prevailing theories of corporate governance presently put forward by regulators, academics and other stakeholders. The objective of the pedagogy to be followed is, therefore, to develop the student into an engaged, critically reflective practitioner, who is not necessarily engaged only in quiet self-reflection, but is social, action- oriented and is able to analyze the dominant thinking in this field. Through reflection, students would acquire new (and hopefully more powerful) understanding and appreciation of the phenomenon of corporate governance, individually and in concert with their colleagues.

The contact sessions for this course would be broadly organized as:

- sessions for Class Room Lecture given by the course Instructor that would expound and package the theory and concepts with illustrations and relate with real life examples;
- sessions of Case Discussion, facilitated by the course Instructor and/or Guest Speakers with dynamic student interaction to simulate, apply and illustrate any given concept, theory or argument;
- sessions of Group discussion and Presentation, led by students, under the supervision of the course Instructor, to communicate, draft and develop the concepts, theory and arguments and make presentations in the class.

Course description:

This course introduces the theories of statistics and econometrics and provides an insight into their applications to economic problems. The course starts with fundamental concepts random variables. After a discussion of some special families of distributions that are widely used in economic applications, the students are introduced to estimation and hypothesis testing. These concepts create a foundation for the subsequent modules on estimation and inference in regression models. The course also emphasizes a discussion of challenges and limitations of regression analysis. The students learn the techniques for preparing raw data for analysis, summarisation, and visualisation of data, and carrying out basic econometric analysis using software such as STATA and R. This course also creates a foundation for advanced econometrics classes and research methods.

Course objectives:

- 1. To provide a foundation of Statistics and Econometrics for undertaking data analysis in Economics.
- 2. An exposure to various theories of Statistics and Econometrics, along with a demonstration of their applications.
- 3. To introduce students to use of statistical software for data analysis.

Course contents					
Module	Торіс	L	Т	Р	
1	Introduction	2	0	0	
	Meaning of 'statistics'				
	Observational versus experimental data				
	Structure of economic data

Course type:	Core	Course offe	red in: Semester 1			
Course descr	iption:					
Microeconom	ics is the study of decision-making at the le	evel of the individua	al or the firm and how i	t relates	to mar	ket
behaviour. It l	begins with study of decision-making when	markets are compe	titive, i.e., when indivi	duals car	nnot in	fluence
the market pri	ce and there is no information asymmetry.	We show that ratio	nal decision-making in	competi	tive ma	urkets
lead to efficie	nt outcomes. Subsequently, we show that m	harkets are no longe	er efficient when the ass	umptior	n of	
competition is	withdrawn. We consider three such deviation	ions from competiti	ve markets, viz., mono	polistic	behavio	our,
strategic bena	viour and asymmetric information, leaving	the analysis of publ	ic goods and externalitie	es for co	urses o	n

Homework Assignment: 20% [Module I-V]						
Test 1: Written Examination : Group 1 40%; [Module I-V]						
Test 2: Written Examination : Group 2: 20%; [Module VI-VII]						
Major Exam: Written Examination : Group 3: 20% [Module VIII- IX]						
Learning outcomes:						
At the end of this course, students will be able to						
1. Understand standard theoretical models of individual and market behaviour at a rigorous level [Homework						
Assignment and Test 1 exam]						
2. Mathematically formulate key microeconomic problems and salient variations [Homework Assignment, Test 2						
exam and Major exam]						
3. Critically appreciate microeconomic assumptions and their limitations [Test 1,2 exam and Major exam]						
Pedagogical approach: Classroom teaching; interactive sessions; tutorials for problem solving.						
Materials:						
Required Texts:						
1. Mas-Colell, A., Whinston, M.D. and Green, J.R., 1995. Microeconomic theory. New York: Oxford						
university press.						
2. Jehle, G.A. and P.J. Reny,2011. Advanced Microeconomic Theory (3rd Edition), Prentice Hall.						
3. Tirole, J., 1988. The theory of industrial organization. MIT press.						
4. Gibbons, R., 1992. Game theory for applied economists. Princeton University Press.						
5. Salanié, B., 2005. The economics of contracts: a primer. MIT press.						
Required papers:						
1. Coase, R.H., 1960. The problem of social cost. The journal of Law and Economics, 3(1), pp.1-40.						
2. Coase, R.H., 1937. The nature of the firm. <i>Economica</i> , 4(16), pp.386-405.						
3. Williamson, O.E., 2000. The new institutional economics: taking stock, looking ahead. Journal of						
<i>Economic Literature</i> , 38(3), pp.595-613.						
Additional information:						
Knowledge of high school calculus is required to follow most of the topics						
Student responsibilities: Attendance, feedback, discipline: as per university rules.						

Course reviewers:

- 1. Krishnendu Ghosh Dastidar, Professor, Centre for Economic Studies and Planning, Jawaharlal Nehru University, New Delhi.
- 2. Manipushpak Mitra, Professor, Economic Research Unit, Indian Statistical Institute, Kolkata.

Programme Structure (MA SDP)

First year

Course d	escription						
This intro	ductory course primarily covers the	core and fundamen	tal aspects of microecon	omics and 1	macro	econo	mics.
The goal	of this course is to make students und	erstand the key ecor	iomic concepts, theories,	and princip	oles an	d hov	v they
microeco	nomics and macroeconomics. The	s is faid off duffulling	s course is how and y	ing and analy	ylical	imn	ortant
mechanis	m for allocating scarce resources) op	erate, and why mark	ets and pricing principles	are fundar	ental	in trac	le-off
and choic	e questions. Besides, how the key e	conomic decisions a	are made by households	and firms a	re dis	cusse	d and
exemplifi	ed. Production, costs, and market st	ructures are analyze	d at firm level. Key ma	cro-econom	ic issu	ies su	ch as
output, in	come, and employment are discusse	ed and their impact	on inflation and other m	acroeconon	nic inc	licato	rs are
examined	. In each module, Indian context is hi	ghlighted so that stu	dents can connect theori	es to practic	e and	to pol	licies.
Explanati	ons of economic concepts are supple	mented by application	on-based cases studies ar	id live exam	ples.		
Course o	hiectives-						
- To	b) develop students critical thinking a	nd analytical abilitie	s around concepts of eco	nomics			
- To	make students understand key econ	omic principles, the	ories and relate it to the v	world they li	ive in.		
- To	make students understand how and	why markets work a	and how prices are deterr	nined			
- To	o understand and analyze how output	out and income are	determined at an aggre	egated level	l and	impa	ct the
(u	n)employment and inflation						
	o help students hone skill sets of anal	yzing, interpreting e	conomic variables throu	gh diagrams	s, and	graph	S
Module		Tonic		<u> </u>	L	Т	Р
I	Introduction to economics	Topic			1	0	0
1	- Basic concepts of Economic	cs			+	0	0
	- Understanding the philosop	hv o of economics

	- A brief history of ideas in e	conomics	1 1 . 1				
	- Techniques of economic an	alysis: theories, mod	lels and tools		0	2	0
11	The economic problem of s	carcity choice and	opportunity cost		0	Z	0
	- Demand, supply, and marke	et equilibrium	opportunity cost				
	- Demand and supply applica	tions					
	- Consumer surplus and prod	ucer's surplus					
	- Market efficiency and their	applications					
	- Elasticity: its various forms	and estimation met	nods, elasticity, and total	revenue			
	- Elasticity applications in the	e field of energy and	environment				
	- Budget constraints determi	nation of optimal ch	oices using indifference	curve			
	analysis and its applications	5		e ur + e			
	- Behavioral economics as an	alternative framew	ork of consumer choice				
III	Production and Cost				8	2	0
	- Production Theory	ю. 					
	- Production function and dif	terent forms	quanta MDTS				
	- Total average and marging	a products Economi	es of scale and scope				
	- Theory of cost	r products Leononn	es or source and scope				
	- Short-run and long run cost	s, cost minimization					
	- Total, average and margina	l costs					
	- Applications of production	and costs theory					
IV	Market structure and regulation		1 1.00		6	2	0
	- Market equilibrium and price	ce determination und	ler different market struc	ture			
	 Perfect and Imperfect mark 	et structure, welfare	costs of monopoly				

-				
	- Market structure, efficiency, and regulation			
	- Regulation of public monopolies			
	- Application in case of infrastructure industries such as energy and water			
V	National Income Accounting	6	1	0
	 Measuring national income, output, and employment – different approaches 			
	- Determination of aggregate output, price level and interest rate – classical,			
	Keynesian, and modern theories and approaches			
	- GDP estimation in India			
VI	Macro-economic policies	5	1	0
	 Policy effects: monetary and fiscal policy 			
	- Indian monetary and fiscal policies: evidence from its evolving dynamics			
	- Open economy macro-economic: balance of payment, exchange rate,			
	international trade, Indian case study		0	
	Total	37	8	0
Evalu	ation criteria:			
•	Test 1: 20%			
•	Assignment (individual): 20 %			
•	Summative Quizzes: 10%			
•	Classroom exercises: 10 %			
•	Major Exam: 40%			
Learni	ng outcomes			
By the	end of the course, students would be able to –			
-	understand the core micro and macroeconomic concepts, theories, models, principles, tools	s, and tech	nnique	es
-	understanding the role of market and prices in influencing key economic activities		1	
-	develop the skills to interpret, analyze the economic concepts and variables through diagra	ms, tables	and g	raphs
-	relate the key economic principles to real life situations, especially in the context of dev	velopment	chall	enges
	which would help students to make informed decisions	1		0
Pedag	ogical approach			
The co	urse will be delivered through a mix of classroom lectures, guizzes, discussions, classroom e	xercises a	nd	
assign	ments and case studies discussion and presentation.			
Cours	e Reading Materials

The cours	e largely comes under the global MDP	Programme, coordin	ated by the Global Se	cretariat o	of ML	P loc	ated
Within the	e UN Sustainable Development Solution	ns Network (SDSN)	office, New York, U	SA. Thro	ugh t	nis gl	obal
MDP ass	de The bread goal of this course is to	introduce the found	es in global classroor	n which i	s esse		y m
for challe	nges to sustainable development and for	introduce the round	tions of key sectoral	ur module		nowie	auge
pillar of s	ustainable development: governance, ec	conomic well-being	environmental protect	ion and s	ocial	inclus	sion
All the m	odules are interrelated and integrated y	with each other and	that is why the cours	e is name	ed as	integr	ated
approach	to sustainable development.					8-	
TT	I I I I I I I I I I I I I I I I I I I						
The cours	e is unique in nature as it allows the stu	udents from differen	t parts of the world to	participa	te in	collec	ctive
learning e	xperiences. The global classroom is cur	rrently conducted by	Lehigh University US	SA and is	attend	led fo	or 14
weeks, be	ginning each September. The course n	naterials, including	the syllabus, readings	, lecture	video	s, etc.	are
available	to the students. Besides global classroor	m, local lectures are a	also being conducted	by the loc	al exp	erts.	This
helps the	students to sync both global and local	perspectives while i	dentifying the challer	iges and	way f	orwar	d to
implemen	t the SDGs. Each module is divided int	to four sections, start	ing with (i) a global (hought le	ader t	o pro	vide
a current	overview of the module, (ii) a global ex	xpert to lead a deepe	er dive into the modul	e, and (11	i) a pr	actiti	oner
who is cu	rently applying the SDGs in action to o	l perspective in	om the front lines and	finally (1	v) a re	egiona	al or
Course ob	iectives	ii perspectives.					
Main object	tives of the course are to make the stude	ents to –					
• fa	miliar with current and emerging global	l issues related to sus	tainable development				
• be	equipped to analyze critical dimension	s of sustainable deve	somet in the contex	t of both	indus	trializ	ed
an	d developing countries		sopment in the contest	it of boui	maas		ea
• be	cognizant of the key spatial and tempor	ral connections and t	heir integration for su	ccessful j	oolicy	and	
pr	actice of sustainable development.		e				
Course c	ontent						
Module	Торіс				L	Т	Р
1	Economic well-being				7	0	0
	Main aim of this module is to make th	ne students understan	d the basic aspects we	ellbeing			
	in relation to sustainable development	t and related SDGs.					
	a) Both global and local exp	perts will specifica	lly highlight the ec	onomic			
	wellbeing including the abil	lity of individuals, f	amilies, and commun	health			
	consistently meet their basic	e needs (including lo	od, nousing, utilities)	, nealth			
	control over their day to day	finances and finance	ig, allu palu taxes), al	iu nave			
2	Environmental Dimension of Sustai	inable Development			7	0	0
_	Main aim of this module is to provide	de a systematic app	roach for conserving	natural		v	v
	resources and the existing natural er	nvironment, managi	ng hazardous materia	als, and			
	raising awareness of environmental in	npacts. The experts v	will be focusing on	,			
	a) various SDGs, providing cou	intry-wise case studi	ies on national policy	for the			
	environment and for water re	esources.					
	b) orient the students reading va	arious policies for th	ne preservation, conse	ervation			
	and sustainable use of ecosys	stems, biodiversity, a	nd forests.				
3	Governance for sustainable develop	oment			7	0	0
	The basic objective of this module	e is to understand	the role of SDGs i	n good			
	governance. The global experts will	explain how variou	s agencies assist dev	eloping			
	countries to develop on effective ge	overnment within a	uemocratic system,	and to			
	highlights are	orneipies through glo	boai partnersnip. Thre	e major			
	a) mechanisms of empowering t	the nublic to enable t	hem to effectively par	ticinate			
	in decision making for public	c interest and to unde	ertake local initiatives	licipate			

	b) how to develop and strengthen good governance at the local level?c) how the capacity of public and the government at the local level help to cooperate in increasing welfare of the people?			
4	Social Inclusion	9	0	0
-	The objective of this module is to orient the students regarding the concept of social	,	U	v
	inclusion The students will be able to understand –			
	a) different forms of inequalities employment related concerns informal sector			
	 a) different forms of inequalities, employment related concerns, informal sector b) how powerty, social stratification like casta class, gondar, athnicity ata, play a 			
	divisive role in the society, which in fact major hindrance for achieving SDCs			
	alvisive fore in the society, which in fact major finderance for achieving SDOs.			
	() now SDOs could play a major fole for eradicating the exclusion to direct it			
	Total	30	Δ	0
E		30	U	U
Evalua	tion criteria			
•	Assignment I (90%): A policy brief, written in a group of two individuals, would be appro	ximat	ely I:	500-
	2000 words in length. The policy brief would require the students to display deep substantiv	e knov	wledg	e of
	sustainable development policy field and grasp of relevant methods / data challenges. T	he po	licy t	orief
	accounts for 90% of the final grade			
•	Active class participation (10%) throughout the semester, accounting for 10% of the final	grade	Stud	ents
	are expected to actively participate in Global Classroom discussions and Local Classroo	m dis	scussi	ons,
	drawing deeply on class readings and on their experience. Students are expected to attend ev	ery se	ssion	and
	actively participate in the discussions.			
Learnir	ng outcomes			
•	The students will be able to identify and analyze key challenges in the implementation	of Su	ıstain	able
	Development Goals (SDGs)			
•	The students will be able to synthesize and review the policy relevant to their area of interve	ention	l	
•	It will relate the findings to current policy debates, with an emphasis on applying the rese	arch	outco	mes
	rather than assessing the research procedures.			
Pedago	gical approach			
•	The course will achieve its learning objectives by deploying a combination of lectures from	interi	nation	ally
	recognized experts, local experts, classroom and online discussion, extensive readings, an	d clas	s wri	ting
	projects like Policy Brief etc.			•
•	The global classroom will be conducted online through the Zoom Video Conferencing web-	based	platfo	orm,
	and the local lecturer will be conducted in the campus and the local lectures will be condu	icted	in off	line
	mode.			
•	Global Thought Leaders will speak for at least 45 minutes, and any remaining time will be d	evote	d to O	&A
	session between classrooms and the speaker whereas the experts and practitioners will spe	ak for	a she	orter
	period than the Global Thought Leaders, the class will be opened to live O&A session	and i	nterac	tive
	discussion among narticinating classrooms	und n	norae	iii ve
•	As far as local expert lecture is concerned there will be one lecture in modules 1, 2 and 3	and	two 1	ocal
•	lectures in module 4	, and		ocui
Course	Reading Materials:			
All read	ings will be posted on the course website a minimum of one week in advance, with some indic	ated a	reau	ired
and oth	are as recommended. These may change as new ones are considered. For some tenies, st	udont	s requ	incu i bo
	d to view a video or become familiar with relevant websites. While the Tuesday Clobal Class	autill	s mag	kers
will add	a to view a view of the issues covered in the readings, the readings are designed to provide a bas	karor	i spea	the
topic of	discussion and are complementary to the leatures. Students may be invited at an dere to provide a bac	Agrot		ione
of issue	s for debate.	ue all	0,61,	ICW.

Course tit	e: Quantitative Approaches and Methods for Development Practice			
Course co	le: MPD 115 No. of credits: 3 L-T-P: 34-6-10 Learning	hour	s: 50	
Pre-requis	ite course code and title (if any):			
Departme	nt: Department of Policy and Management Studies			
Course co	ordinator(s): Dr Chandan Kumar Course instructor(s): Dr Chandan Kum	nar		
Contact de	tails: chandan.kumar@terisas.ac.in			
Course typ	e: Compulsory Core Course offered in: Semester 1			
Course de	cription			
This cours	e is designed and implemented to help students develop and strengthen their ability to	unde	rstan	d the
importance	and scope of quantitative approaches and methods in development-related investigations. The	e cou	rse ai	ms to
create a fir	n base on basic statistical tools and techniques, their appropriate application in development	resea	Irch a	nd to
neip studer	ts build perspectives based on robust analytical approaches.			
Learning	DDJectives:			
• 10	provide students with a basic ability to design a quantitative study.			
• 10	enable students to draw inferences from the data.			
• 10	help students make the optimal decision on the selection of appropriate statistical methods for	r qua	ntitati	ive
Course con	tä allalysis. htent			
Module	Topic	ſ.	т	Р
1	Cains and Fundamentals of Quantitative Approaches in Development Inquiry	1	1	1
1	This module aims to orient students towards the need and application of statistical tools and			
	quantitative approaches in the development sector. Since the students pursuing the MA-SDP			
	programme come from diverse disciplines' backgrounds and they might not have sufficient			
	exposure to statistics during their undergraduate courses, example-based introduction to			
	statistical techniques and their applications is emphasized. This module will include			
	discussion and practices on:			
	a) Importance and Examples of Quantitative Approaches in Development Inquiry			
	b) Statistical Thinking			
	c) Types of Data			
2	Quantitative Study Design and Process of Data Collection	3	2	2
	The focus of this module would be on describing in detail the strategies a practitioner would			
	use to collect data, making a note of how they will address the primary issues associated			
	with the method they are employing to investigate development-related inquiries. The			
	details included in this module are:			
	a) Experimental Research Design: pre-experimental, true experimental, and quasi-			
	experimental study design			
	b) Non-Experimental/Observational/Survey Research Design: Cross-Sectional			
	Design, Longitudinal Study Design			
	c) Population, Sampling, and Subjects: concept of population and sample, various			
	approaches to the sampling, central limit theorem, issues in sample size selection,			
	and basic sampling designs			
	d) Preparation of Survey Instrument: Questionnaire Construction – two-column-			
2	table-approach	1.4	2	6
3	Quantitative Data Analysis and Assessment This module will focus on describing the methods of quantitative data analysis, including	14	2	0
	the descriptive and informatic statistical tests. Discussion would also anonymous the			
	measures the practitioners should take to increase the validity and reliability of their results			
	The details included in this module are:			
	a) Descriptive statistics: Frequencies. Measures of Central tendency Measures of			
	Dispersion			
	b) Inferential statistics: introduction to hypothesis testing, type of statistical errors			
	level of significance, confidence interval, statistical vs. practical significance, and			
	some commonly used statistical tests.			
	c) Evaluating quantitative research: Validity and Reliability			
	d) Bivariate analysis: Concept of Correlation and Regression (OLS)			
	d) Divariate analysis, concept of contention and regression (OES)			

4	Introduc	ction to Multivariate Analysis	6	2	
	The focu	s of this module is to provide students with an orientation on select multivariate			
	regressio	n models and their applications in different contexts of development inquiry, such			
	as:				
	a)	Correlation Matrix and Multivariate Linear Regression method: application and fundamental assumptions/considerations; examples taken from different			
		analyses carried out in the domain of the development sector; basic nuances including the method of ordinary least squares, regression coefficients, R^2 and adjusted R^2			
	b)	Multivariate Logistic Regression Model: application and prerequisites; examples taken from different analyses carried out in the domain of the development sector			
	c)	Other popular multivariate models: application and prerequisites; examples taken from different analyses carried out in the domain of the development sector			
5	Outlinir	ng, Interpreting and Discussing Quantitative Analysis	2		2
	This mod	lule would focus on orienting the students to layout, interpret, present (including			
	visual de	pictions of the data), and document the results of a quantitative research study.			
	Major di	scussion would be around:			
	a)	Organization/presentation of quantitative data into meaningful tables			
	b)	Graphical presentation			
	c)	Interpretation and Discussion of results			
	d)	Acknowledging limitations of a quantitative study			
	Total		34	6	10
Evaluation	criteria	:	1	I	

Course grades will be based on the following criteria:

- **Test-1:** Written Test (20%); as a part of a mid-course evaluation under each Programme by the University in terms of intermediary minor tests, the students will be evaluated based on a written test. The structure of the minor test usually follows short-answer-type questions, which would cover the initial two modules of the course. This minor test would share one-fifth of the total marks required for evaluating the candidates under this course. The test will be conducted after 8 weeks of lectures or after the completion of modules 1-2.
- **Test-2:** Submission of Assignment (30%); the students are required to submit a set of three assignments basedon the statistical exercises conducted in the classroom. The preparation of this assignment would be made during the tutorial/practical classes and will be submitted and presented after the completion of relevant sections of the course or as suggested by the Course Instructor. One of those assignments could be the preparation of a structured questionnaire on their area of inquiry.
- Major exam: Presentation and submission of a quantitative study proposal (50%); the students are required to select any development inquiry which is quantitative in nature (based on the study objective), and develop a research proposal, which will be submitted and presented as a part of the major/final test. The structure of the research proposal for a quantitative research study includes:
 - Introduction 0
 - **Research Questions** 0
 - Objectives 0
 - Methodology: Research hypothesis; Study setting; Study design; Reference and study population; 0 Sample size; Sampling method; Exclusion criteria (if any); Specify the measures/variables; Study tools/instruments; Technique/Process of using the instruments and making the measurements; Pilot study, Data analysis plan
 - **Expected Outcomes** 0
 - Study Timeline 0

Indicators for evaluation: (a) Identification of research problem; (b) Framing research questions, objectives and hypothesis (if any); (c) Description of components under methodology section; (d) Conceptualizing expected outcomes and timeline; (d) Content, language, clarity; (e) Reference style and number of references cited

Learning outcomes

- 1. Upon completion of the course, candidates would be able to use basic statistical tools, learn ways to present quantitative data and get the ability to draw useful inferences from analysed data.
- 2. Knowledge of statistical tools and their usage will help students appropriately apply such techniques in the research that they'll carry out in the following semesters as well as in future.
- 3. Students would get the ability to develop a research proposal based on objective(s) which require(s) investigation using quantitative approaches and methods.

Pedagogical approach

Classroom lectures, excel-based data analysis, interesting TED talks from renowned development specialists e.g., Hans Rosling, who uses Gap-minder software to bring data alive, and invited talks from guest speakers, especially those working in the development sector who could provide exposure to different sorts of quantitative analysis carried out by them on real-world data.

Module	Торіс				L	Т	Р	
1	Philosophy of social research				6			
	The main aim of this module is to facilitate the st	udents to el	lucidate their philosoph	ical				
	stance in relation to elaborating their research app	proach towa	ards social inquiry. The	module				
	will begin with the rationale of philosophical assu	imptions in	research – ontology,					
	epistemology, and methodology followed by the	conceptuali	zation of three broad re	search				
	paradigms or worldviews – positivism, constructi	vism or int	erpretivism and pragma	tism.				
	Further, the students will also be oriented with fe	w interpret	ive frameworks. Hence,	the				
	following topics will be covered in this module –	• .						
	 Key philosophical assumptions – ontolo 	gy, epistem	ology, and methodolog	У				
	- Research paradigm/worldview – positivi	sm, constru	uctivism or interpretivis	m and				
	pragmatic approach							
	- Interpretive frameworks: Social Constru	ctivism, Tr	ansformative Framewor	ːks,				
2	Social Justice Interpretive Framework, C Designing qualitative study	ritical The	ory		0		6	
2	Purpose of this module is to make a framework of	r blueprint	for conducting the qua	litative	0		0	
	research. The module will start with the rationale	of using a	ualitative study focusin	g				
	exclusively on when to use and what a qualitative	study requ	ires from us. Five key	0				
	approaches to qualitative research design followe	d by vario	us aspects of literature	review,				
	formulation of research problems and questions	vill be disc	ussed elaborately.					
	 Rationale of using qualitative study 							
	 Five key approaches to qualitative inc 	quiry						
	– Narrative research							
	 Phenomenological research 	ırch						
	 Grounded theory resear 	ch						
	– Ethnographic research							
	– Case study research							
	- Review of Literature	A 7 1 1	C)					
	- Referencing and citation (training in	Mendeley s	software)					
	- Framing research problem statement	and questic	ons					
3	- Research proposal Writing Ouglitative data collection				0		e	
5	The nurnose of this module is to understand varie	ue acroate	of data collection in the	field	צ		0	
	starting from the rapport establishment to qualitat	us aspects	or data concenton in the	rious				
	qualitative tools etc. The module will enable the	students to	expose the reality in the	field				
	situation while explaining various field related is	sues. The fo	ollowing tonics will be a	covered in				
	the module.		site wing topics win be t					
	- Access and Rapport (within the Fi	ve Approad	ches)					

	 Qualitative sampling strategy (participants, types of sampling, sample size) 		
	- Forms of Data: Interview methods (in-depth interview and FGD); Observation		
	method (direct, indirect, and participant observation)		
	 Validity in qualitative research and mixed method 		
	- Field Issues (access to the organization, observations, interviews, documents		
	and audiovisual materials, ethical issues)		
4	Qualitative data analysis and representation	10	10
	The main objective of this module is to analyze qualitative data as it largely involves		
	organizing the data, conducting a preliminary read-through of the database, coding and		
	organizing themes, representing the data, and forming an interpretation of them. The module		
	will start with the qualitative content analysis and will subsequently highlight data coding and		
	thematic analysis. The module will also introduce qualitative data analysis software called		
	NVivo and a training session will be conducted at the end of the module.		
	 — Qualitative content analysis (conventional directed and summative content analysis) 		
	 Qualitative content analysis (conventional, anected, and summative content analysis, Qualitative data coding (in-vivo coding, process coding, open coding, descriptive, and 		
	structural coding, simultaneous coding, and thematic analysis		
	Qualitative data analysis cofficient (NVino)		
	- Qualitative data analysis software (NVIVO)	22	24

Student responsibilities

- 1. Students are expected to prepare for the classes. In case, they are unprepared, the same should be informed in advance. However, only one-time exemption is allowed
- 2. In addition, we shall follow NO mobile phone policy during the class hours
- 3. As the University has the policy of minimum 75% of physical presence, the students are expected to plan their academic activities considering the learning goals and evaluation criterion of the Course
- 4. All the submissions shall be done one-day before the deadline
- 5. Lastly, any sorts of academic dishonesty including cheating, copying, inappropriate collaboration and plagiarism will NOT be acceptable.

Course reviewers:

Course title: Law, Society and Sustainable Development

2. Familiarity with the institutional structure of Indian environmental governance and the role of the Indian

judiciary.

- 3. Familiarity with the Gender and Human rights issues
- 4. Understanding the procedural and substantive requirements in certain areas of environmental regulation such as environmental clearance and forest clearance.
- 5. Appreciating the need for transparency, accountability and effective public participation in environmental decision making

Pedagogical approach:

The course will be taught through interactive sessions based on previously circulated readings. Many environmental legal principles in India have organically developed through judgments of the courts and these judgments will be discussed in class. It is understood that most students do not have a background in law and therefore the readings for class will be decided and the student assessment undertaken keeping that in mind.

Course description

The course discusses and analyse the role of energy in the development of India. The focus of the course is on the conventional energy sources & their conversion technologies as well as the environmental impacts including global warming and climate change.

Course objectives

The objective of the courses is to develop understanding for the following:

- Utilization of conventional energy sources coal, oil & natural gas, nuclear and hydro
- Environmental implications due to use of conventional energy resources

Course con	itents			
Module	Торіс	L	Т	Р
1	Overview of Energy Sector – Global & Indian Context	2	0	0
	COAL			
	Coal Basics			
2	Formation of coal	2	0	0
	World and domestic reserves of coal	2	0	0
	Production & imports of coal			
	Coal types, coal characteristics and properties			
	Quality of Indian coals			
	Coal Utilization Technologies			
3	Uses of cool	2		
3	Coal washing pyrolysis compusion assification liquefaction Coal bad	2	0	0
	methana, ash utilisation		Ű	Ũ
	Environmental Agreets and Clean Lize of Cool			
	Environmental Aspects and Clean Use of Coal			
	Environmental impacts of coal mining and combustion and pollution control			
4	manufacts of coar mining and combustion and ponduoi control	3	0	0
	Clean and technologies		-	-
	Carbon dioxide capture, storage and utilization			
	Carbon dioxide capture, storage and utilization			
	OIL & NATURAL GAS	1		
	Basics			
5	Formation of oil and natural gas	2	0	0
	Reserves of oil and natural gas			
	Production, imports of oil & gas			
	Uses &Environmental Aspects			
6	Use of petroleum products as fuels and feedstock Uses of natural gas, LNG,			
	CNG, LPG	2	0	0
	Oil Refining			
	Environmental aspects of oil and natural gas	<u> </u>		
	NUCLEAR			

	Basics				
7					
	Overview on Radioactivity -half- life, nuclear decay, nuclear reactions	3	0	0	
	Uranium and thorium reserves				
	Nuclear Reactors and technologies				
	Fuel Processing and Safety				
8					
	Nuclear fuel cycle	2	0	0	
	Nuclear fuel reprocessing, safety & nuclear waste management				
	HYDRO				
	Basic & Technology				
9	Basic concepts, hydro potential and exploitation in India	5	0	0	
	Major hydroelectric power plants in India	5	0	0	
	Components of hydroelectric power plant: weir/intake, channel, desilting,				
	forebay, spillway, penstock, turbine – Impulse and Reaction, generator,				
	governor				
	Environmental Issues				
10					
	Environmental issues	3	0	0	
	Constraints and problems				
	Future Prospects				
	ENERGY AND CLIMATE CHANGE LINKAGES				
	Energy and carbon emissions				
11	International Response to Climate Change – UNFCCC	4	0	0	
11	SDGs and Energy - Accessibility, affordability reliability and sustainability	4	0	0	
		30	0	0	
Evaluation	ı criteria				
 Assign 	ments: (after completion of module 6) - 20%				
 Test 1: 	(after completion of modules 1, 2, and 3) - 20%				
 Test 2: 	(after completion of modules 4, 5, 6, and 7) - 20%				
 Major 	exam: (at the end of the semester after completion of all modules) - 40%				
Learning	outcomes				
At the end	of the course the student will be able to				
 To und 	lerstand the energy systems. (Test 1)				
 Quanti 	 Quantify the scale of pollution from a conventional Energy source. (Test 2 and Major exam 3) 				
 Identif 	y strength and weak-linkages in the energy systems. (Test 2 and Major exam 3)				
Pedagogic	al approach				
A combinat	tion of class-room interactions, tutorials, assignments and projects.

Course description					

The course is meant to comprehensively impart knowledge on the overall policy and regulatory environment governing renewable energy development in the country. The students will also be sensitized to emergent trends competitive bidding in Solar and Wind based capacity addition.

The course will cover national and state policies, regulatory and legislative frameworks on Renewable Energy. Some of these policies and guidelines emanate from an overarching Act such as the Electricity Act and policies such as the National Climate Change Policy. The policies, regulations and guidelines determining grid integration of renewable energy such as electricity off-take approaches, tariffs, control period and even technical requirements like maintenance of grid frequency in a certain bandetc. It is also important to have an understanding of the institutional architecture that enables implementation of the policies and regulation as much as the policies in force.

The course will present a policy and regulatory framework for renewable energy as it is practiced in India. However, similar frameworks either exist in other developed and developing countries will also be studied for possible adoption in India.

Course objectives

- To impart knowledge on the overall policy, regulatory and institutional framework on Renewable Energy
- To provide understanding of the main drivers that influence Renewable Energy policy formulation
- To provide insights on emergent policy trends with regard to generation and procurement of renewable energy
- To describe and analyse policy instruments used in promotion of renewable energy in India and globally

Contact details: <u>deepty.jain@terisas.ac.in</u>					
Course type: Programme Core Course	se offered in: Semester 1				
Course description In today's time, spatial data analysis helps support of students of MTech Urban Development Management data collection, management, interpretation and analy develop understanding of Geoinformation Systems (domain to the students joining the program and holding will help them build knowledge base and develop skil	decision making in urban do learn the techniques of spatia sis. The course is designed to GIS) and remote sensing im- g graduation from varied disc lls that they can use in variou	main. It is il data analy introduce ageries app iplines. The s courses a	prudent sis that the conc lication course nd in pr	t that the includes cepts and in urban structure actice.	
 Course objectives To provide understanding of remote sensing To develop acumen of remote sensing/ GIS t management. To enable handling of raster data including i To develop technical skills in GIS application 	/ GIS techniques. cool application for urban dev mage classification and hype n and software for spatial an	relopment a	and in pro-	actice.	
		<i></i>			
Course content					
Module Topic		L	Т	Р	
1 Introduction to Remote sensing: Electron observation, Types of sensors and applica Spatial referencing, Image interpretation	nagnetic spectrum and earth ations, Image correction,	6	4	4	
2 Applied Remote sensing for UDM: Super classification for mapping land use land of for land surface temperature mapping, Hy vegetation index and built-up index mapping neighbourhood and zonal statistics, Case	rvised and unsupervised cover, Thermal remote sensing yperspectral remote sensing ping, Spatial statistics – examples	ng For 6		6	
3 Introduction to Geoinformation systems: database management systems, Spatial da representations, Topology and spatial rela language (Spatial), Map Coordinate Syste to UTM)	Spatial and non-spatial ata types, Vector ationships, Sequential query ems (Data Reprojection GCS	6	4	4	
4 Applied Geoinformation system for UDM Data Collection (Mobile survey, Geotagg quality/data gaps checks and repairs, Dat analysis (overlay functions, proximity an Data visualization (symbology, map layo Case examples	A: Digitizing urban features, ging photos, geocoding, Data a interpolation, Spatial data alysis, multicriteria analysis) but and for alternate platform	, 4 s), 4	4	8	
Total		22	12	22	
Details of the labs					
Acquiring remote sensing imagery and spat	ial referencing of imageries			2	

2	Image correction technique		2
3	Supervised and unsupervised image classification and validation through site visits		2
4	Land surface temperature mapping		2
5	Normalized Difference Vegetation Index, Normalized Difference Built-up Index mapping and spatial statistics		2
6	Spatial database management and attribute management		2
7	Map projection and datum		2
8	Vector data acquisition using open-source platforms, digitization and editing		2
9	Spatial and non-spatial SQL, Join and Relate with vector data		2
10	Spatial data analysis		2
11	Map visualization, data classification and map composition		2

Evaluation criteria: Lab assignments / tutorial

Test 1: 15%, Assessment based on module 1

Test 2: 15%, Assessment based on module 3

Lab Assignments/Tutorials: 20%, submission of regular assignments in correspondence to practical lab components, showcase learning of tools and methods based on lab component module 1 - 4

Project: 20%, a project on integrated application of the tools and methods taught throughout the semester.

Major exam: 30%, overall syllabus and course

Learning outcomes:

Students will be able to

- 1. Use remote sensing imageries in various applications of urban development and management.
- 2. Gather and manage spatial data.
- 3. Conduct analysis using spatial data on GIS platforms.
- 4. Generate maps ready for visual interpretation and inclusion in reports and presentations.

Pedagogical approach:

The course is designed in a way that remains independent of a particular software. The knowledge gathered can be applied on any platform. For practical exercises in the class like QGIS, ILWIS, ERDAS IMAGINE and ArcGIS will be used.

The course will be delivered through class lectures, lab exercise and tutorials and appropriate case studies will be introduced to strengthen the understanding of application of tools and techniques in practice.

Course Reading Materials:

- 1. Jensen J., Remote Sensing of the Environment: An Earth Resource Perspective, Pearsons, 2009.
- 2. Lillesand T., Kiefer R. W. and Chipman J., Remote Sensing and Image Interpretation, Wiley & Sons, 2009.
- 3. Lo, C.P. and Yeung, A.K.W., Concepts and Techniques of Geographic Information Systems, PHI Leaning Private Limited 2011.
- 4. Longley P. A., Barnsley M. J., Donnay Jean-Paul, Remote Sensing and Urban Analysis, Taylor & Francis, 2001.
- 5. Yang, X., Urban Remote Sensing Monitoring, Synthesis and Modeling in the urban Environment, WileyBlackwell, 2011.

Journals for reference:

Computers, Environment and Urban Systems International Journal of Geographic Information Systems Urban Planning and Development

Student responsibilities:

Timely submission of weekly lab assignments, Initiative for conducting project, regularity in class, thorough reading of provided material, practice, etc.

Course reviewers:

Dr. A. K. Gosain, Professor, Department of Civil Engineering, Indian Institute of Technology Delhi

Ms. Eleza Boban, Senior GIS Specialist, Stantec, Qatar

Course typ	e: Elective Course offered in: Semester III						
India is gra million ton 2050 (PIB, with knowl Thus, it is t The course sector amon sound under	Course description India is grappling with an increasing rate of waste generation. According to a recent CPCB report, India generates 67 million tonnes of solid waste annually. The figure will rise to 125 million tonnes in 2030 and 377 million tonnes in 2050 (PIB, 2016). Therefore, managing this growing waste will demand professional interventions by trained people with knowledge and skills. Currently, only a handful of qualified individuals are involved in solid waste management. Thus, it is the need of the hour that individuals are capacitated to manage solid waste professionally and responsibly. The course has been designed to develop entrepreneurial skills and a knowledge base of the solid waste management sector among students. The course will help students approach waste management with innovation, creativity, and a sound understanding of the ground reality.						
Course obj To imp To ider To pror passion To prov To crea manage	 Course objectives To impart knowledge on solid waste management To identify gaps/ challenges in the sector and explore the scope of scientific intervention To promote an entrepreneurial mindset and temper among students, young professionals, and others who are passionate about contributing to this sector To provide mentorship and support to aspiring entrepreneurs To create a batch of technically sound and professionally trained entrepreneurs in the realm of solid waste management 						
Course con	tent						
Module	Торіс	L	Т	Р			
1.	Defining Entrepreneurship Defining entrepreneurship; factors influencing entrepreneurship; characteristics of entrepreneurs; risk and benefits associated with entrepreneurship; SWOT Analysis and its importance; SWOT Analysis at individual and organizational level; setting up an organization; types of organizations; procedures to set up organization; statutory compliance in setting up organization	7	1				
2.	Understanding Solid Waste Management Meaning, types and characteristic of solid waste; global and local trends in generation of solid waste; opportunity- threat analysis of solid waste; solid Waste Management- meaning and importance; components of solid waste management; analysis of current status of management of solid waste in India; challenges faced by the sector	3	1				
3.	Policy Frameworks Solid Waste Management Rules 2016; Plastic Waste Management (Amendment) Rules 2022; E-Waste Management Rules 2021; Bio-Medical Waste Management Rules 2016; Construction & Demolition Waste Management Rules 2016; Hazardous and other waste (Management and Transboundary Movement) Rules 2016; guidelines, policies and schemes on entrepreneurship in India; linkage between policy framework and business opportunity.	8					

4.	Exploring Opportunities in Supply Chain of Solid Waste Management Collection, Storage and Transportation of waste- methods of waste collection- functional details of bins and vehicles- business opportunity in collection and transportation- Material Recovery Facility; recycling of compostable waste material- composting types and model- decentralized vs. centralized composting model- manual vs semi-mechanized vs mechanized model- marketing of compost- anaerobic digestion and other methods of treatment; recycling of non-compostable waste material- recycling technologies for different waste commodities -market for recycled products and their application- circular economy; sanitary landfill; waste management compliances; IEC as a business opportunity; other opportunities in urban waste management.	14	2	4
5	Developing Business from Opportunities Business design; business pitch; technical proposal; financial proposal	4	2	
6	Financial evaluation of projects and partnerships models Assessing financial feasibility of business opportunities; importance of assessment; cost-benefit analysis; return on investment; importance of partnership; factors affecting partnership; models of partnerships; hypothetical cases of a SWM business (financial component).	6		
7	Implementing the Plan Site survey; brainstorming for readiness; resource mobilization; training of manpower; revisiting business/project plan; operations and maintenance; financial management; documentation; monitoring and evaluation; communication; evaluation	7	1	
8	Branding and Marketing Basics of branding and marketing; impact of marketing; platforms for marketing; important tools for branding and marketing of service/product; strategies of marketing and branding	4		
	Total	53	7	4
Evaluation (Criteria			
Test 1: 20% Test 2: 20% Test 3: 40% Tutorials: 20 Learning ou	[Module 1, 2 & 3, after 5-6 weeks of teaching] [Module 4 & 5, after 12-13 weeks of teaching] [Module 1 to 8, end of semester] % [Tutorial assignments spread over entire semester] ttcomes			
After comple dev anal gras und exp lear set t [Assessment semester] Pedagogica	eting this course, the students will be able to elop an understanding of solid waste and its management; lyze the global and local scenario of solid waste management; sp policy framework associated with solid waste management and entrepreneurship; erstand the supply chain of waste management and technological advancement in the f lore entrepreneurial opportunities offered by the sector; n project management skills; up and manage their enterprise in the field of solid waste management. mechanism for learning outcomes: The three tests and tutorial assignments spread over al approach	field; er the en	ntire	
The course assignment	will in Hybrid mode, Classes will be held on Saturday and Sunday including a field tr and relevant case studies.	ip, tuto	rial

Course title: Air quality monitoring						
Course code	e: NRE No. of credits: 2 L-T-P: 24-0-12 Lean	ning h	ours: 36	5		
Pre-requisit	e course code and title (if any): No pre-requisite required					
Department	: Natural and Applied Sciences					
Course coor	dinator(s): Course instructor(s):					
Contact det	ails:					
Course type	:: Core Course offered in:					
Course desc	ription					
The course f	ocuses on the science behind air quality monitoring with significant empha	sis on h	ands-on	use,		
maintenance	& calibration of monitoring instruments. The course aims to equip the part	ticipants	s with sl	cill		
sets to carry	out any monitoring exercise with competence & confidence.					
Course obje	ctives					
■ To enha	nce the skills in air quality monitoring					
Io prov	ide an understanding of the science behind air quality monitoring and analy	/\$1\$				
Course com	Topic	T	т	D		
	10ptc		1	P		
1.	Ambient air quality: Overview pollutants, sources of pollution, national	1				
	standards.	1				
	Importance of air quality & its impacts on human health	1				
	plants/vegetation & agriculture:	-				
	Monitoring requirements under the air act and various methods of	1				
	monitoring;					
	Units and materials and energy balance;	1				
	Local meteorology and its role in air quality management.	1				
2.	Air quality sampling, infrastructure and instruments	1				
	Ambient air sampling, techniques and infrastructure requirements;			1		
	Demonstration of instruments;			1		
	Setting up samplers for monitoring of PM10, PM2.5, SO2 & NOx in			2		
	ambient air;	1		2		
	Techniques of monitoring ozone ammonia and heavy metals;	1				
	Standard operative procedures/methods of quantitative analysis of	2				
	particulates and gases;					
	Modern instrument for monitoring of benzene and other organic gases.	1.5				
3.	Instrument calibration & maintenance, sample retrieval and analysis					
	Calibration of samplers;					
	Demonstration of calibration of samplers;	2				
	Retrieval of samples from instruments, sample preservation, storage and			2		
	transportation to lab for analysis;					
	Demonstration of quantitative analysis of pollutants;			2		
	Preventive maintenance of samplers;	1		3		
	Quality assurance and quality control	1				
	Sensor based systems:	1.5				
	Visit to CAAOMS	1.5				
		1		2		
		1		_		
4.	Air quality data analysis	1				
	Air quality data analysis and interpretation;	1				
	Importance & need for source apportionment studies.	1				

5.	Air pollution control Appropriate techniques for air pollution control systems:	1				
	Emerging technologies & mitigation of air pollution.	1.5				
6.	Noise pollution monitoring					
	Noise Pollution, its monitoring & control.	1.5				
	Total	24	0	12		
Evaluation	criteria					
 Major 	Test: 70%					
 Viva v 	oce: 30%					
Learning o	utcomes					
After comp	leting this course the students will be able to					
 technic 	ues of obtaining reliable air quality data					
 adequa 	tely use, operate, maintain, and calibrate air quality monitoring instruments					
Pedagogica	al approach					
Classroom	lectures, hands on demonstration and site visit.					
Additional information (if any)						
Student re	Student responsibilities					
The student	The students are expected to submit assignments in time and come prepared with readings when provided.
