

Neil is a Senior Research Lecturer in Corporate Social Responsibility and Sustainability. He specialises in progressive economics approaches to environmental economics and policy and in ecological economics, an interdisciplinary field of research emphasising the interdependence of economic and ecological values. His research on the economics of biodiversity conservation, policy to combat climate change, and the governance underlying the commercial kangaroo industry is published in *Ecological Economics*, the *Journal of Economic Perspectives*, and *Wildlife Research*. Neil is a regular contributor to *The Conversation* where he provides a critical perspective on environmental policy issues and he performs pro bono work for environmental organisations on biodiversity policy and the cost benefit analyses used to justify coal mining. Neil consults on the medicinal cannabis industry in Australia and the social costs and benefits of improved sustainability practices in local government areas.
