Course title: Risk Analysis and Implementation Management					
Course code: BSI 185	No. of credits 3	L-T-P distribution: 36-06-0	Learning hours: 42		
Pre-requisite course code a	and title (if any) : None				
<b>Department:</b> Department of	f Business Sustainability				
<b>Course coordinator(s):</b>		Course instructors(s):			
Contact details:					
Course type: Elective		<b>Course offered in:</b> Semester 2			

#### **Course description**

This course provides a holistic view of risks associated within and across infrastructure projects, including the emergent and resource-based sectors. The content focuses on strategies and implementation management that can be utilized to create a strong risk culture across projects for evaluating potential risks to ensure problems are identified at an early stage. This would further help to avoid reworks and delays which can cause cost overrun.

### **Course objectives**

Public and private sector executives tasked with the delivery of major infrastructure projects will have the answers to the problems they face when looking to integrate risk into the design and delivery of their infrastructure project.

#### **Course content**

Module	Торіс	L	T	P
1.	Risk management process	2	0	0
	Success of infrastructure projects is greatly influenced by proper			
	management of risk associated with the projects through adoption of appropriate risk management framework. This module will create an			
	awareness among students about different stages of risk			
	managementprocess. It includes:			
	Riskidentification			
	Riskassessment			
	Riskallocation			
	Riskmitigation			
2.	Risk measures techniques	3	1	0
	Though the awareness of risk management process is necessary but is not			
	sufficient enough. In order to do appropriate project risk analysis, students			
	need to understand various techniques applied for measurement of risk.			
	This module facilitates to understand the perspective and quantum of risk			
	associated with projects and how is risk analyzed and assessed inpractice. It			
	covers:  Sensitivityanalysis			
	<ul><li>Sensitivityanalysis</li><li>Scenarioanalysis</li></ul>			
	Scenarioanarysis     Break evenanalysis			
	Simulationanalysis			
	<ul><li>Decision treeanalysis</li></ul>			
	Networkanalysis			
	■ Value at Risk(VaR)			
	Riskmodelling			
	Risk-software			
3.	Strategy implementation	3	1	0
	Strategy is about winning. The role of strategy in success has to be			
	understood carefully. Strategy implementation is inherent in project			
	implementation. This module provides the basic understanding of the role			
	of various components of strategy in projectimplementation. Students are			
	exposed to these concepts in order to comprehend the theoretical			1

		1	1	1
	framework of project implementation.			
	■ The concept ofstrategy			
	<ul><li>Goals, values andperformance</li></ul>			
	<ul> <li>Business and industry environment: Thefundamentals</li> </ul>			
	<ul> <li>Analyzing resources and capabilities: Understandingthe</li> </ul>			
	internal environment			
	<ul> <li>Developing resources andcapabilities</li> </ul>			
	Organization structure and management systems: The fundamentals of			
	strategy implementation			
4.		3	0	0
4.	Implementation management A transformation process uses resources to convert inputs into some desire	3	0	U
	outputs. Physical as well as service infrastructure projects involved			
	transformation process; for example, physical (in manufacturing), location			
	(In transportation), exchange (in retailing), storage (in warehousing),			
	physiological (in health care), informational (in telecommunication). This			
	module provides an understanding of various businesses in order to			
	identify the risk involved in these businesses. It includes			
	Transformationprocesses			
	<ul> <li>Operations strategy and competitiveness</li> </ul>			
	<ul><li>Productdesign</li></ul>			
	<ul><li>Process analysis</li></ul>			
	<ul><li>Facilitylocation</li></ul>			
	<ul> <li>Facilitylayout</li> </ul>			
	Strategic capacitymanagement			
	<ul> <li>Projectmanagement</li> </ul>			
Ì	<ul> <li>Operations technology</li> </ul>			
5.	operations technology	2	1	0
5.	How project structures create value	2	1	0
5.	How project structures create value  The structural attributes of infrastructure projects enable students to find	2	1	0
5.	How project structures create value  The structural attributes of infrastructure projects enable students to find out financial and other resources of projects that enable lenders and equity	2	1	0
5.	How project structures create value  The structural attributes of infrastructure projects enable students to find out financial and other resources of projects that enable lenders and equity holders to invest substantial funds. In this module student shall develop	2	1	0
5.	How project structures create value  The structural attributes of infrastructure projects enable students to find out financial and other resources of projects that enable lenders and equity holders to invest substantial funds. In this module student shall develop rationale for various types of contracts and models that form the backbone	2	1	0
5.	How project structures create value  The structural attributes of infrastructure projects enable students to find out financial and other resources of projects that enable lenders and equity holders to invest substantial funds. In this module student shall develop rationale for various types of contracts and models that form the backbone of project financingtransactions.	2	1	0
5.	How project structures create value  The structural attributes of infrastructure projects enable students to find out financial and other resources of projects that enable lenders and equity holders to invest substantial funds. In this module student shall develop rationale for various types of contracts and models that form the backbone of project financingtransactions.  StructuralAttributes	2	1	0
5.	How project structures create value  The structural attributes of infrastructure projects enable students to find out financial and other resources of projects that enable lenders and equity holders to invest substantial funds. In this module student shall develop rationale for various types of contracts and models that form the backbone of project financingtransactions. 7.	Managing cost risk and uncertainty in infrastructure projects  This module looks at the management of cost risk and uncertainty throughout the project life cycle for mitigating of risks. It also addresses the practical challenges around the financial estimation of risk. Students, in this module shall understand the challenges related to risks in real and practical situations of infrastructureprojects. It covers;  Exploring thechallenges  The project life cycle andrisk  Useful tools andapproaches  Forwardprogram  Risk breakdownstructures  Recommendations	4	2	0
8.	Common language is essential to communicationsabout uncertainty and its management It is essential tocommunicate to students, the concepts clearly and unambiguously. In this module, attempt has been made to explain "defined terms" to ensure clarity to this course. We shall start with explanatory overview and then present a definition for each specialist term. This module provides to students the meaning and understanding of about fifty definitions and terminologies used in thiscourse. It covers;  Overview Glossarylisting Casestudy	3	0	0
9.	Project and emerging risks in infrastructure financing  Cross-border infrastructure financing requires that projects participant assume certain risks in addition to those common to infrastructure projects including the currency risk, political risk, tax policies, economic sensitivity, limited remedies and others. This module will help the students to understand the emergent risks along with project risk involved in cross border infrastructureprojects. It includes;  • Risk management in projectfinance  • Nature of credit risk and projectfinance  • Refinancingrisk  • Institutional sharing of risk origination and risktaking-syndicated loan market  • Emerging risk and garret'sranking  • Debt rating criteria  • Key issues in emergingmarkets	3	1	0
10.	Risk management in resource sector infrastructure projects  Resource sector is termed as an infrastructure sector dealing with natural resources like coal, metal and mining. This module deals with conducting risk assessments and integration of risk and value management for resource sector infrastructure projects. Students are exposed to assimilate this risk assessment methodology used for sector-specific projects. It will discuss;  Planning and conducting risk assessments in advance of appropriate project milestones or activities to allow identification and resolution of risks without disrupting the project schedules  The integration of risk and value management asinputs into a robust decision - making process  Understanding the effects of uncertainty on project Objectives	3	0	0

	<ul> <li>Approaches taken to manage the project planningand</li> </ul>			
	controls on a project			
11.	Risk sensitive investment and resilient infrastructure  This module deals with risk rating criteria of projects. It also deals with the disaster management and effect of climate risk in infrastructure projects.  The students shall be required to add the said aspects in their knowledge of risk management of infrastructure projects. It includes;  RISE initiative – Risk sensitiveinvestment  UN disaster resilientscorecard  Integrating climatic risk into infrastructureprojects  Pricing risk and resilience intodesign	2	1	0
12.	An integrated approach to a successful infrastructure project  - Initiation, Financing and Execution  Major infrastructure projects have got certain inherent problems. Cost overruns, delays, failed procurement, unavailability of private financing are common. In this module, discussion will take place on good risk - informed project management across the value chain in order to give clear picture to students about the difference between good and badlydesign infrastructure projects.  Challenges for large scaleprojects  Some typical causes offailure  Project risk across the Infrastructure Life Cycle -(ERM)  Selecting, planning and designphase  Procurement and contractual designchoices  Constructiondelivery  Assetoperation	3	0	0
13.	Cutting through barriers to infrastructure project success  The content in this module provides the holistic view of key infrastructure projects and latest techniques of managing various types of risks. Students will become familiar with the latest thinking and trends in this area. It explaines;  Innovation (and itsbarriers)  Finance  Procurementpractices  Policy and planningrisk  Skills availability	3	0	0
	Total	36	6	0
Evaluation				
	1: Class participation 10%			
•Test	2: Project 30%			

# **Learning outcome:**

•Test 3: Written Test

•Test 4: Written Test

An understanding of the risk management processes and techniques in today's context

20%

40%

- An understanding of project risks and emerging risks in infrastructure financing
- The capability to be able to assess and suggest ways and means to address the practical challenges around the financial estimation of risk in infrastructure projects.

# Pedagogical approach:

A combination of class-room interactions, tutorials, assignments and projects.

### **Reading Materials:**

### Suggested Readings:

- Project Finance in Theory and Practice by Stefano Gatti, Elsevier, Academic Press (2018)
- Corporate Finance by Ross, Westerfield& Jaffe, Mc Graw Hill, 12<sup>th</sup> ed. (2019)

# Additional Readings:

 Journal articles, Case Studies and other relevant information As and when provided/suggested by the course instructor

## Additional information (if any)

## **Student responsibilities**

Attendance, feedback, institutional discipline, research ethics

# Prepared By:

Dr. KK Jain

#### **Coursereviewers:**

Dr Madhu Vij,MDI

Mr SC Gupta, Former Director, Reliance Infrastructure
