

Course title: Multivariate Data Analysis				
Course code: NRE 112		No. of credits: 3	L-T-P: 28-14-0	Learning hours: 42
Pre-requisite course code and title (if any): NRE 115 Environmental Statistics				
Department: Department of Energy and Environment				
Course coordinator(s):			Course instructor(s): Mr Kaushik Roy Chowdhury	
Contact details: guest.faculty16@terisas.ac.in				
Course type: Elective		Course offered in: Semester 3		
Course Description Large amount of data is collected on many different variables across disciplines in order to understand the underlying process(es). The multivariate analysis of data deals with examining interrelationship between three or more equally important variables or explaining of variation in, usually one (or more than one) dependent variable(s) on the basis of two or more independent (explaining) variables. With the availability of inexpensive, fast and efficient computing resources and statistical packages there has been a growth in the application of these techniques. This course introduces the student to various multivariate data analysis tools. The focus is on cross-disciplinary application of these techniques.				
Course objectives				
<ul style="list-style-type: none"> ▪ Introduce the language of multivariate data analysis ▪ Understand the characteristics of multivariate quantitative research, including strengths and weaknesses ▪ Understand the principles and characteristics of the multivariate data analysis techniques 				
Course content				
Module	Topic	L	T	P
1.	Introduction Basic multivariate statistics—mean, variance, covariance, correlation, linear combination of variables, geometric concepts, distances	4	2	
2.	Interdependence methods Principal component analysis, factor analysis, cluster analysis, correspondence analysis, multidimensional scaling	12	6	
3.	Dependence methods Multiple regression models, logistic regression canonical correlation, discriminant analysis.	12	6	
	Total	28	14	
Evaluation criteria				
<ul style="list-style-type: none"> ▪ Test 1: 15% ▪ Test 2: 15% ▪ Assignment/viva voce: 20% ▪ Test 3: 50% 				
Learning outcomes				
<ul style="list-style-type: none"> ▪ distinguish between dependence and interdependence methods in multivariate data analysis ▪ identify the most appropriate statistical techniques for a multivariate dataset ▪ carry out and apply commonly used multivariate data analysis techniques, and interpret results ▪ use statistical software packages for the analysis of multivariate data 				
Pedagogical approach				
Materials
